

Cloud of Things for Smart Cities

A JOINT EUROPEAN-JAPANESE PROJECT

ClouT Reference architecture

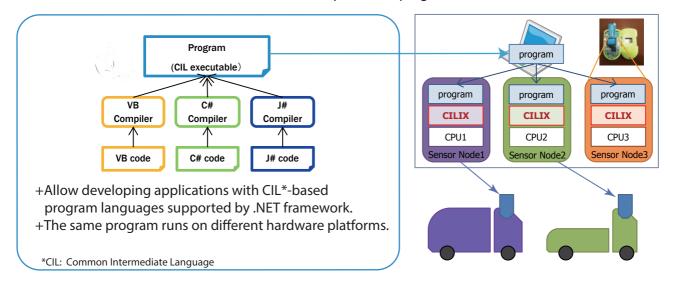

- +Enable communicating with IoT devices and interacting with them
- +Provide a proper set of interfaces to be offered by different implementations
- +Provide virtualization techniques on top of different hardware platforms

CILIX: Virtual Machine for Wireless Sensor Network Applications

+Virtualize the hardware of sensor devices and separate the program code from the hardware

Field Trials in Fujisawa-city

- +Garbage trucks are sensorized by CILIX VM technology for mobile environmental sensing
- +Collect 13 kinds of atmospheric sensor data in city-wide area
- +Control center for real-time monitoring sensorized cars and visualizing sensor data on a map
